DETAILED ACTION
EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The claims have been amended as follows for a grammatical (i.e. spelling) error:

Claim 1, line 8, deleted "sheet" inserted --- sheath --- therein.

Claim 7, line 8, deleted "sheet" inserted --- sheath --- therein.

Claim 14, line 9, deleted "sheet" inserted --- sheath --- therein.

Allowable Subject Matter

Claims 1-11, 14-18, and 20 are allowed.

The following is an examiner's statement of reasons for allowance:

The instant application is allowable over the prior art because the instant application teaches a device and method that require a cell holding device comprising a hollow sheath open at one end having a cell-contact tip diameter of between 0.1-0.8 mm. The hollow sheath encloses an electrode needle that is provided with a plurality of sensing electrodes wherein at least one of the electrodes is arranged at the proximity of the cell contact tip such that, when a cell is held at the tip, it is arranged to penetrate the

cell membrane and at least one other electrode arranged at a distance from the cell contact tip such that it does not penetrate the cell membrane. Additionally, the instant application teaches that the hollow sheath may contain a plurality of elongated electrode needles each provided with at least one sensing electrode wherein at least one electrode needle is arranged at the proximity of the cell contact tip such that, when a cell is held, it is arranged to penetrate the cell membrane and wherein at least one electrode needle is arranged at a distance from the cell contact tip such that it does not penetrate the cell membrane.

The first closest prior art of record, Dineen et al. (US 7,101,472 B2) teach a hollow sheath open at a tip containing multiple electrodes; however, Dineen et al. does not teach that the device is utilized for cell holding or that the device contains elongated electrode needles or at least one elongated needle containing a plurality of sensing electrodes wherein the hollow sheath has a cell-contact tip diameter of between 0.1-0.8 mm.

The second closest prior art of record, Heller et al. (US 6,135,990), teach an electrode arrangement comprising a plurality of electrode needles each with a plurality of sensing electrodes, but does not teach that these are surrounded by a hollow sheath or that at least one sensing electrode or needle is arranged at the proximity of the cell contact tip such that, when a cell is held, is arranged to penetrate the cell membrane and wherein at least one electrode needle is arranged at a distance from the cell contact tip such that it does not penetrate the cell membrane.

The remaining prior arts of reference, Norwood et al. (WO 01/71349 A1) and Noboru (JP 11299496) both teach a patch clamp device (i.e. cell holding device) but do not teach that the electrode within the sheath contains a plurality of sensing electrodes or that the hollow sheath contains a plurality of electrode needles. These references also do not teach that at least one of the sensing electrodes or one of the electrode needles are is arranged at the proximity of the cell contact tip such that, when a cell is held, is arranged to penetrate the cell membrane and wherein at least one sensing electrode or electrode needle is arranged at a distance from the cell contact tip such that it does not penetrate the cell membrane.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
